All for it – Andy, Michael, Ritchie & I talked about it 2 weeks ago so I'll let Andy know to go ahead with the test.

See below. Ed does bring up a good point about the other compost attachment in the documentation page. Let's convert ppm to mg/kg and then the comparison makes a little more sense.

As for the testing, I'm not convinced that WS&T has the ability to test for the other pollutants of concern... but maybe I'm wrong. What Ed is looking for is a direct comparison of all the pollutants of concern + metals of our biosolids compost vs. store bought compost and manure. Can we do this?

Ty

Thanks. I didn't realize it was up already. In checking the attached documentation, it is good, but mostly unintelligible. Putting other compost up with ppm when I don't think any of our data is PPM is kind of odd. I say I don't think we show it that way because some of the attachments are so small I couldn't read them.

Also, Michael Carlin thinks that Andrew DeGraca's group could do the testing we have talked about or have

 NOT AN OFFICIAL RECORD

contracts where we could do it rather easily. That we would be our compost versus other commercially available compost. Could you look into that?

Yes, I incorporated her earlier thoughts and yesterday removed the stringent word from the statement. It has been posted on the main homepage for the past few days. I'm thinking of pulling it as main sfwater.org story early next week depending if we get any more murmurings from the public. We'll still keep the response on the main biosolids and biosolids compost page though.

Did you get a chance to incorporate Francesca's thoughts?

Hey Ed,

Here is the biosolids compost statement for posting on the main homepage. Let me know if you have any changes.

Thanks,

Ty
